

	Requirement	Description
1	Web Page	We will need a web page , for the user to log in, to check the options to prepare the coffee and create the profiles.
2	Phone Application (Same structure of the web page)	This will be the same web page just adjusted for the phone. We will need this because we want to build a full remote access.
3	Full access coffee options	We will need to have full access and control of this coffee maker because this will be the coffee where the people prepare as they want.
4	A data base	We need a database for storing all the users data.
5	IoT System (hardware and software)	This is the part when we apply the internet of things, because this scanner system will be integrated in the coffee maker, this system let the user prepare the coffee remotely with all the specifications that the user previously configured in his profile.
6	Programmers team	Like all pages and application is very probable that we will have some errors and a lot of adjustments to make. So this programmers will be updating the website and the application.
7	Support team	We will need this team, because we want to allow that the people make comments or to contact us. So this team will be standing by to help and support the

		users.
8	Specialized engineers	This team will be needed for the installation of all the systems, first for the IoT system and then for the app. This team is very important because they will make sure that all our hardware and software its functional and ready to go.
